

# Vomit Clean-up Procedure

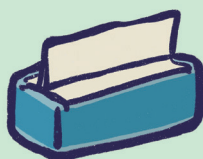

## Items to be prepared

Bucket

Plastic bags

Paper towels

Disinfectant

Bottle to dilute a solution

- Repare all necessary tools such as a disinfectant, disposable gloves in a bucket in advance.
- Put the procedure note in the bucket as well to ensure all teaching staff are aware of it.

## Clothing

Disposable mask

Protective or apron (plastic)

Disposable gloves  
Double the items

Wear goggles and a face mask as needed

## Disinfectant

- Use 0.1% sodium hypochlorite (Alcohol does not work)
- Using the original solution may produce harmful gases, **so it must be diluted with water before use.** (Make sure to check a product label since every product has a different concentration)

## Notes

- Do not prepare diluted solution in advance. Store in a form of original solution.
- Label the container to ensure that children do not accidentally drink it.

# Vomit Clean-up Procedure

## Clean-up Procedure

1

Dilute sodium hypochlorite with a specified amount of water.

2

Cover the vomit with paper towels and apply disinfectant.

3

Wipe towards the center to gather it.

4

Put the matter wiped in Step [3] in doubled plastic bags, and apply disinfectant.

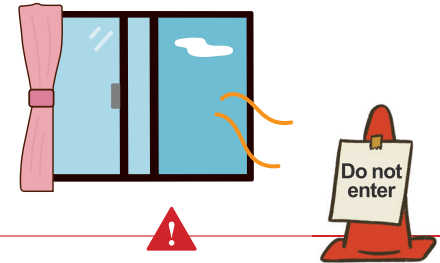

5

Spray the disinfectant on paper towels to wipe the surrounding areas for disinfection.

6

Put all items used in the doubled plastic bag. Close each bag tightly for disposal.

- Open a window for ventilation.
- Do not let people enter the room for 30 minutes after the clean-up procedure.
- Wash your hands thoroughly after the clean-up procedure.
